

# Gen-Tracker **MB12** (Modbus Only)

## **MB12** for Generac Nexus/Evolution

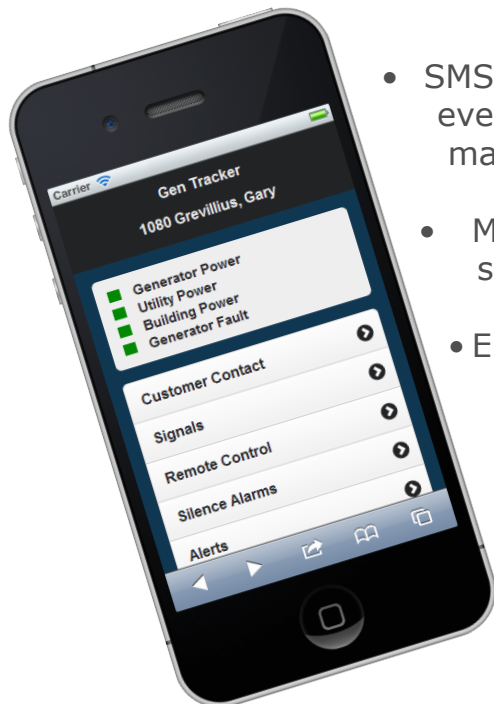

Finally, a simple, compact and affordable solution for your home standby generator. Now you and your service company can work together to keep your generator running at peak performance.

The Gen-Tracker **MB12** is the latest addition to the proven arsenal of generator monitoring devices by Generator Solutions, the leader in universal monitoring for standby generators. For use with the Generac line of Nexus controllers (air-cooled generators 2008-and-newer with LCD display, and liquid cooled 2010-and-newer). The MB12 offers quick and easy installation, simple cellular communication, and invaluable data.

### Notifications and Reports

Send notifications via SMS Text Message and Email to as many recipients as you desire. Customize what each recipient receives. Get reports automatically emailed after each generator run, monthly summaries and more.

### Web Portal

Secured and easy to use web portal allows you to see what your generator is doing from anywhere in the world. Manage your notifications and reports, view history summaries and detailed events.

### How it Works

Installed at the generator the Gen-Tracker MB12 communicates via cellular M2M network to the Gen-Tracker Data Center in Minnesota which processes and issues communications to the service companies and end users regarding their generator.

Working together with Gen-Tracker and your service company, you can rest assured. Your generator will work when you need it.
